

RR 16

Commercial & Industrial Regulator

The RR 16 regulator is designed for industrial use: gas supply networks, district stations, industries, heating plants, as well as for all installations where accurate pressure control, easy adjustment and fast response times are required, such as for burners, industrial ovens, boilers etc.

Description

The RR 16 regulator is a direct-acting, spring-loaded regulator with an optional built-in safety shut-off device.

The balanced valve ensures constant outlet pressure when the upstream pressure varies.

Key Benefits

- » Built-in resistance
- » Cartridge type diaphragm and valve assembly for easy maintenance
- » Wide range of interchangeable orifices
- » Approved by German DVGW

Technical Features

Maximum inlet pressure	16.0 bar
Outlet pressure	10 mbar - 1.1 bar
Accuracy & lock-up pressure	Up to AC5 / up to SG 10
Operating temperature	Gas: -20° C to +60° C Ambient: -30°C to + 60°C
Acceptable gases	Natural gas, propane, butane, air, nitrogen and all non-corrosive gases
Safety devices	Optional built-in safety shut-off valve OPSO: Over-pressure shut-off UPSO: Under-pressure shut-off
Options	Built-in silencer Monitor version

Sizes & Connections

Sizes	DN 25, DN 50, DN 80
Body lengths	See table page 4
Flanges	PN 16

Materials

Body	Spheroidal graphite cast iron EN-GJS-400-18-LT
Actuator	Steel S235 JR
SSV actuator	Brass, steel and aluminium
Internal parts	Steel, zinc-coated / Stainless steel
Seals	NBR rubber / Viton
Diaphragm	NBR rubber / NBR rubber, reinforced fabric

Operational Diagram

RR16 regulator with SL-IZ safety shut-off valve
Cross-section

Accuracy Class (AC), lock-up pressure class (SG) and lock-up pressure zone (SZ):

- » 10 - 20 mbar: AC 20 / SG 30
- » 20 - 100 mbar: AC 10 / SG 20
- » 100 mbar: AC 5 / SG 10

The typical lock-up pressure zone is SZ 10. Reduced zone is available on request.

where:

Q = volumetric flow rate in m³/h at standard conditions
P_u = absolute inlet pressure in bar
P_d = absolute outlet pressure in bar

	8H - Ø 310	955-203-73**	rouge	8.0	130 - 350 mbar
		955-202-83	gris	11	600 - 1100 mbar
		955-202-82	yellow	9.5	300 - 650 mbar

* When the regulator is fitted with this spring, the accuracy class becomes AC 20 instead of AC 10.

** Special spring.

Note:

For better accuracy, choose the largest actuator size.

8N actuator offers a reduced overall dimension for compact installation.

FLOW CAPACITY

Flow Coefficient

The RR 16 regulator can be fitted with an orifice of various sizes in order to match the capacity requirements. Large orifices offer extra-large flow rate possibilities, but are not recommended for high inlet pressures.

Regulator Size	Orifice Size	Max. Inlet Pressure	Flow* Coefficient Kg
DN 25	24 mm	16 bar	210
	31 mm**	16 bar	430
DN 50	24 mm	16 bar	450
	31 mm**	16 bar	580
	42 mm**	16 bar	1000
	54 mm	5 bar	1440
DN 80	42 mm	16 bar	1400
	54 mm**	16 bar	2300
	82 mm	4 bar	3440

* The flow coefficient is calculated for a regulator in the fully opened position.

** When using this orifice, the accuracy classes as indicated are valid if the inlet pressure variation does not exceed 10 bar.

Sizing Equation

For a 0.6 specific gravity gas, the wide-open orifice flow (Q) may be calculated using the following equations:

- » Sub-critical flow behaviour: $Q = K_G \sqrt{P_d(P_u - P_d)}$ where $(P_u - P_d) \leq 0.5 P_u$
- » Critical flow behaviour: $Q = K_G P_u / 2$ where $(P_u - P_d) > 0.5 P_u$

Standard conditions:

- Absolute pressure of 1.013 bar
- Temperature of 15°C

Capacities are indicated for a regulator with a built-in safety shut-off valve. When a noise abatement device is built into the regulator as well, the values mentioned in the tables -- or calculated from the sizing equation -- should be reduced by 10%.

Correction factor for non-natural gas applications:

The flow rates are indicated for a 0.6 specific gravity gas. To determine the volumetric flow rate for gases other than natural gas, multiply or calculate the values in the capacity tables using the sizing equations with a correction factor. The table below lists correction factors for some common gases:

Gas type	Specific gravity	Correction factor
Air	1.00	0.77
Butane	2.01	0.55
Carbondioxide (dry)	1.52	0.63
Carbon monoxide (dry)	0.97	0.79
Natural gas	0.60	1.00
Nitrogen	0.97	0.79
Propane	1.53	0.63
Propane-Air mix	1.20	0.71

Specific gravity or relative density (air = 1, non-dimensional value)

Use the following formula to calculate the correction factor for gases not listed above. In the formula, d is the specific gravity of the gas.

$$\text{Correction factor} = \sqrt{\frac{0.6}{d}}$$

Do not operate the orifice in the inlet pressure areas marked with ●.

Installation

The following drawing shows a model installation for the RR 16 regulator with a built-in safety shut-off valve, Type SL-IZ. The usual position for installation is horizontal.

Typical installation

Type Designation

RR16-	XX-	XX-	XXX-	S..-XXX	Variants
	25 50 80				DN size
		24 31 42 54 82			Orifice size (DN 25 & DN 50) (DN 25 & DN 50) (DN 50 & DN 80) (DN 50 & DN 80) (DN 80 only)
			8 N 8 H 12 N		Actuator size
				SL-IZN.1 SL-IZM.1 SSV-033 SSV-022	SSV (OPSO) SSV (OPSO and UPSO)

Options

- » Monitor application: special balanced stem for regulator installed in the upstream monitor position.
- » Silencer: noise abatement device around the valve seat to reduce the sound pressure level by around 10 dB.
- » Valve travel indicator

SSV options

- » Valve position switch:
Ex proximity switch
- » Emergency push-button

Information to be specified when ordering:

- » Regulator type code
- » Minimum and maximum inlet pressures
- » Outlet pressure range setting
- » Outlet pressure setting
- » Connection type
- » Options
 - » OPSO setting*
 - » UPSO setting*
